程序代写代做 CS编程辅导

Motivating Problem

- A major bank currently offers Private Banking services to its clients in the city of Melbourne. The bank is investigating the possibility of extending its Private Banking business to include several major country towns: Geelong, Ballarat, Hamilton and Bendigo.
- The bank wants to survey potential clients in these districts to determine whether likely demand would make this business viable.
- Suggest a sampling/survey design for the bank to use, outlining the issues you need to consider and any problems you anticipate.

10 Survey questions

These questions could be addressed using survey data:

1. Who is settling in better, country or city students?
2. Are students happy with the quality of food in the Campus Centre?
3. What is the average savings of first year students?
4. Do savings differ between students of different faculties?
5. What is the average age of glider pilots?
6. Are OZ Lotto Division 1 winners still happy one year after their win?
7. Where do the majority of visitors to my website click through from – Google? Yahoo? Or?
8. Is Coles cheaper than Woolworths?
9. What proportion of Australians support immigration?
10. Would the Liberal Party win an election held today?

Question 3

The sampling method in Question 1 is an example of:

WeChat: cstutorcs

A. a random sample. ^{Assignment Project Exam Help}

B. a convenience sample. ^{Email: tutorcs@163.com}

C. a census. ^{QQ: 749389476}

D. a cluster sample. ^{<https://tutorcs.com>}

E. a judgemental sample.

程序代写代做 CS编程辅导

Choosing a Sample

- Probability Design

- Random Sampling
- Systematic Sampling
- Stratified Sampling
- Cluster Sampling

WeChat: cstutorcs

- Non-Probability Design

- Convenience Sampling
- Judgemental Sampling
- Quota Sampling
- Snowball Sampling

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Non-probability designs are more prone to bias.

程序代写代做 CS编程辅导

Populations and Samples

- Population: whole collection of what we are observing.
- Sample: subset we actually observe.
- *We look at the sample to make an inference about the population.*
- Population Parameter: the thing of interest.
- Sample Statistic: what we actually measure.
- *We estimate the value of the population parameter from the sample statistic.*

WeChat: cstutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Population (*frame*)

Sample

One Observation
Variable has value X or O

程序代写代做 CS编程辅导

Reasons for Using Samples

- High cost of sampling a whole population.
- Length of time required to sample whole population.
- May have too much data.
- May not have access to whole population.
- Sampling can be destructive
 - Testing seat belts for breaking strain.
- A census is a survey of a whole population.
 - The Australian population census is conducted once every five years.

Question 4

I want to know whether Monash students support a Rail link from city. Which sample is least biased?

-
- WeChat: cstutorcs**
- Assignment Project Exam Help**
- Email: tutorcs@163.com**
- QQ: 749389476**
- <https://tutorcs.com>**
- A. Email all students and record the first 100 responses.
 - B. Randomly choose 100 students in the Campus Centre at lunch time.
 - C. Randomly choose a subject (say MED1000) and randomly choose 100 students from that class.
 - ✓ D. Choose 100 students at random from the University's register and email them.

<https://flux.qa> ^{程序代写 代做 CS 编程辅导} (Feed code: SJ6KGV)

Question 5

I want to know whether people with early-onset Alzheimer's disease have had trouble managing their personal finances. The best survey method is:

^{WeChat: cstutorcs}

^{Assignment Project Exam Help}

- ✓ A. Face-to-face interview ^{Email: tutorcs@163.com}
- B. Telephone interview ^{QQ: 749389476}
- C. A postal survey ^{<https://tutorcs.com>}
- D. An Internet survey.

Types of Surveys

程序代写代做 CS编程辅导

- There are three main types of survey methods:

- Personal (face-to-face) Interview
- Telephone Survey
- Self-administered survey (postal/Internet)

WeChat: cstutorcs

Assignment Project Exam Help

- Two main issues are at stake.

- How to encourage people to respond truthfully and accurately?
- How to conduct the survey with the minimum cost?

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

Stages of a Survey

程序代写代做 CS编程辅导

- Exploratory interview or focus group
 - Identify issues, hypothesis and questions
- Questionnaire designed and tested
- Experimental design and population *frame* is determined
- Samples are selected
- Questionnaire is administered
- Analysis and reporting

Survey Errors

程序代写代做 CS编程辅导

■ Sampling Errors

- The characteristics of the sample do not match those of the population.
- This is usually addressed by taking a larger sample.

WeChat: tutorcs

■ Non-sampling Errors

- Errors in response or in recording data
- Misclassification or inaccurate response
- Bias in the selection of the sample
- Non-response bias, Self-selection of respondents.

Key Ideas

程序代写代做 CS编程辅导

▪ You should be familiar with the following:

- Parameter, Sample, Statistic, Variable, Observation;
- The reasons for sampling;
- The 3 main methods of surveying (advantages / disadvantages of each);
- Causes of error in surveys;
- Methods of choosing samples (4 random / 4 non-random methods).

程序代写代做 CS编程辅导

Key Ideas cont...

■ Main points:

- Think of sampling as the first stage in the process of statistical analysis so errors here undermine any conclusions we can draw from subsequent analysis.
- Relevant issues are: sampling method, survey design, potential bias in sample selection.
- In later lectures we look at how sample size affects the validity of conclusions we draw.

WeChat: estutorcs

Assignment Project Exam Help

Email: tutorcs@163.com

QQ: 749389476

<https://tutorcs.com>

程序代写代做 CS编程辅导

Key Ideas cont...

■ Think about:

- How we sample
- Why we sample,
- How we conduct a survey and collect the results,
- Problems or considerations that emerge depending on our choice of sample/survey method.

Question 9

Based on a poll result of 49% ALP and 51% Coalition with a sample size of 1,205 we can conclude that:

WeChat: cstutorcs

- A. 95% sure ALP would have won an election held over the sampling period.
- B. 95% sure Coalition would have won the election.
- C. Results are too close to call.
- D. Sample size is too small.
- E. Don't know.

We will revisit this question later in our course

Expert attacks 'healthy' food tick

程序代写代做 CS编程辅导

Excerpt:

- “Dr Rosemary Stanton, in an article published online in *The Medical Journal of Australia*, said food manufacturers paid to use the tick for products that might be less healthy than alternatives.

WeChat: cstutorcs

- Manufacturers pay a licence fee, based on a sliding scale of annual sales, to use the tick logo ...

Email: tutorcs@163.com

- But Dr Stanton said comparable products that did not carry the tick could be a better choice, and were usually cheaper because their prices were not inflated by licence fees...”

QQ: 749389476

https://tutorcs.com

- Design a survey to test whether ticked items are more expensive than their non-ticked counterparts.

- <http://www.theage.com.au/national/expert-attacks-healthy-food-tick-20110228-1bbqy.html>
